Self-Evaluation & Behavioral Observation

1. **Pedagogical Objective** This instrument is designed to foster metacognitive awareness and self-regulatory skills in learners within a Special Education (SPED) framework. By integrating a "How do I feel today?" emotional check-in, the tool utilizes a trauma-informed approach to establish a baseline for the student's internal state before behavioral assessment begins .
2. **Key Innovations & Functional Advantages**
 - **Dual-Perspective Assessment:** The form requires concurrent evaluation from both the Student and Teacher, facilitating a comparative analysis of behavioral perceptions.
 - **Operationalized Criteria:** High-contrast visual icons and clear quantitative descriptions (e.g., "0-1 reminder" vs. "constant help") reduce ambiguity and support learners with varying cognitive and linguistic profiles .
 - **Automated Data Synthesis:** Embedded JavaScript (specifically the "Performance Data" module) automates the calculation of session scores and "Accuracy Matches" . This significantly mitigates "Document Fatigue" and ensures data integrity for subsequent Functional Behavioral Assessments (FBA).
 - **Honesty Analytics:** The system tracks the "Accuracy Match" to quantify the student's progress in self-awareness, shifting the focus from mere compliance to internal honesty and reflection.

CRITERIA

5

Great

I did it with 0-1 reminder.

3

Okay

I did it with 2-3 reminders.

1

Needs help

I needed constant help today.

Great

Okay

Needs help

TEACHER

1. I followed directions.

2. I stayed calm.

3. I was kind to others.

4. I listened to my teacher.

Purpose and Intended Use

This tool is engineered for offline use to directly address two critical challenges in local teaching environments:

- The Digital Divide: Ensuring functionality in areas with limited connectivity.
- Document Fatigue

Notice: The developer assumes no liability for technical errors or system failures resulting from unauthorized modifications made to the embedded JavaScript. To maintain system integrity, users are advised to use the interface as provided.
